

SPECIALTY SERIES PREMIER OUTPUT TRAITS

AgriGold's Specialty Products Team works with end-users to determine which hybrids fit their processing needs while educating customers on contract and premium opportunities.

For extensive data and research on our silage and feed products, contact your Corn Specialist or visit agrigold.com to download the Feed and Silage Book.

OUR COMMITMENT TO CONVENTIONAL SEED

AgReliant Genetics uses seed production practices to produce conventional seed with the lowest risk possible concerning GM contamination. Seed fields are chosen to maximize isolation from other corn and are monitored throughout the growing season. AgReliant Quality Assurance then uses standardized seed sampling procedures to ensure a representative sample of each seed lot. This sample is then tested for GM DNA using PCR testing, which is one of the most sensitive tests available. Hybrid units testing 1% or less GM contamination are directed to growers for non-gmo premium markets.

AgriGold knows the importance of quality silage products for our customers' feed needs. We use third-party silage testing on our silage products to ensure dairy and livestock producers are confident that our hybrid recommendations will boost their bottom line. Ratings and characteristics are assigned by AgriGold based on comparisons with other AgriGold products (not competitive products) through in-house field testing. Individual results may vary, and performance may vary from location to location and from year to year. This result may not be an indicator of results you may obtain as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible.
